

## The Comprehensive Alcohol and Substance Abuse Treatment Program

2021

The Harriman State Campus, 1220 Washington Avenue, Albany, NY 12226-2050 I www.doccs.ny.gov

#### CASAT PROGRAM

The New York State Department of Corrections and Community Supervision (NYSDOCCS) Comprehensive Alcohol and Substance Abuse Treatment (CASAT) program was a creation of the 1989 Prison Omnibus Legislation.<sup>1</sup> This legislation called for the establishment of six 200-bed alcohol and substance abuse treatment annexes at specified locations. Persons successfully completing the sixmonth long annex phase of treatment (Phase I) would be transferred to a work release facility or an appropriate community based program (Phase II). The law also provided for an aftercare component upon release from the Department while under the supervision of the Division of Parole (Phase III). Appendix A diagrams the movement of the incarcerated individual through the CASAT program phases.

After briefly summarizing the CASAT program's history since 1990, this report focuses on recent program trends from 2006-2021. For an in-depth description of the CASAT program, please see *"The Comprehensive Alcohol and Substance Abuse Treatment Program: 2008"*.<sup>2</sup>

#### PROGRAM GOALS

The CASAT program, with its mandate to provide a continuum of treatment services, is designed to achieve the following goals:

- To focus facility resources on the needs of incarcerated individuals with a history of alcohol and substance abuse.
- To better prepare participants for return to their families and communities upon release.
- To reduce drug and alcohol relapse rates and recidivism rates for program participants.
- To ensure appropriate aftercare services in the community.
- To increase coordination among the pertinent state and local agencies, service providers, and community organizations.

<sup>&</sup>lt;sup>1</sup> The New York State Department of Correctional Services and the New York State Division of Parole were merged through Legislative action on April 1, 2011. The resulting agency is the New York State Department of Corrections and Community Supervision.

<sup>&</sup>lt;sup>2</sup> "The Comprehensive Alcohol and Substance Abuse Treatment Program: 2008," New York State Department of Correctional Services, Albany, New York 12226 (2009).

#### CURRENT PROGRAM ELIGIBILITY

- Documented history of alcohol and/or drug abuse.
- Minimum of 9 months to earliest release at the time of review to allow for sufficient program time, but no more than 24 months to merit eligibility (if, merit eligible) or earliest release date. One exception to this is that drug offenders may enter Phase I at 30 months to earliest release.
- Classified as medium or minimum security.
- Temporary Release program approvable except for some drug offenders sentenced by judges to CASAT treatment (court-mandated CASAT). Court-mandated CASAT offenders who do not meet Temporary Release program eligibility, are permitted to enter Phase I but are not allowed to transition to Phase II. This group is referred to as Phase I-only participants. This program modification, implemented in May 2006, permits a larger pool of offenders to receive intensive, residential drug treatment. Court-mandated offenders who meet all established CASAT requirements are only eligible to enter Phase II upon completion of Phase I if the incarcerated individual is approved for Temporary Release participation and transferred to a Work Release facility.

The review for CASAT eligibility is conducted via an automated screening during Reception processing or later at a general confinement facility during an interview between the incarcerated individual and their Offender Rehabilitation Coordinator. If a review determines a need for substance abuse treatment and the individual is statutorily eligible for Temporary Release program application, an automated Presumptive Work Release application for CASAT participation is generated at the facility level. The application, upon facility recommendation, is forwarded to Temporary Release in Central Office for a final review of appropriateness for work release upon completion of CASAT Phase I. Those individuals found to be acceptable for Temporary Release represent the pool of potential participants for traditional CASAT Phase I and II programs.

Historical information on CASAT is included in this report on the DOCCS website: <u>https://doccs.ny.gov/system/files/documents/2022/06/2020-casat-report.pdf</u>.

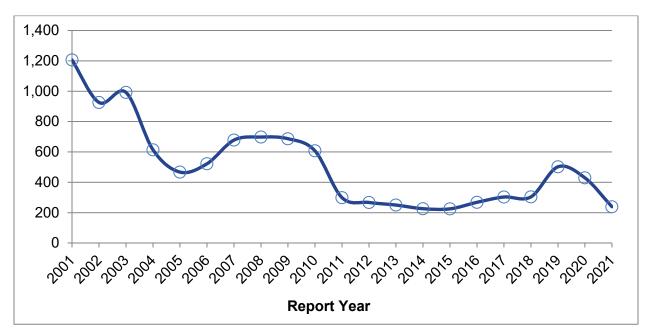

#### PHASE I PARTICIPANT POPULATION: 2006-2021

- Declines in CASAT Phase I participation continued until 2006 when the first impact of permitting temporary release ineligible, court-mandated individuals in the CASAT program was observed. The program increased from 467 on June 30, 2005 to 522 participants on June 30, 2006 (see Table 1.1).
- After the introduction of the court-mandated, temporary release ineligible participants in 2006, Phase I participation rose until the first half of 2010 before declining. As a response to the steep decline in Phase I participation during the second half of 2010 and 2011, the Department closed Wyoming Alcohol and Substance Abuse Correctional Treatment Center (ASACTC) (120 beds) in March 2011 and reduced the program capacity of Taconic ASACTC to 44 treatment beds (from 136 beds) in May 2011 (see Table 1.1). Remaining Wyoming CASAT participants were transferred to Arthurkill and Hale Creek to complete Phase I.
- Over a ten-year period, 2002-2011, the NYSDOCCS experienced a significant reduction in its under custody population. As a result, during 2011 and 2012, seven medium and minimum-security facilities were closed, including Arthurkill. CASAT participants not nearing program completion were transferred to a new 60-bed program at Marcy Correctional Facility that opened in October 2011 (see Table 1.2).
- In December 2012, the program for female CASAT participants was moved from Taconic ASACTC to Albion Correctional Facility. The program capacity at Albion ASACTC increased from 40 beds to 60 beds in August 2018 and decreased to 30 beds in June 2021.
- On June 30, 2021, there were 239 Phase I participants, 190 less than on June 30, 2020. This was a decrease of 44% in Phase I participants.
- On June 30, 2021, seven, or 3%, of the total Phase I participants were court mandated and work release ineligible, compared with 44% of Phase I participants at the end of June 2011. As a result, a larger proportion of participants who complete Phase I are eligible to participate in Phase II, which requires temporary release approval.

\*Some program beds at CASAT facilities are occupied by offenders either waiting to begin Phase I or Phase I completers awaiting transfer to work release or general confinement facilities. These offenders are not included in these figures.

• As of June 30, 2021, 48% of all CASAT program beds were filled with participants. Albion was operating at 53% capacity, Marcy was at 68% capacity, while Hale Creek was at 44% capacity (see Table 1.2).

Declines in the number of incarcerated individuals eligible for the CASAT program were a consequence of the sweeping Drug Law Reform Act of 2009. Elements of this law encouraged the expansion of Drug Courts and community-based substance abuse treatment in order to divert drug offenders from NYSDOCCS incarceration. Since the Sentencing Reform Act (SRA) of 1995, approximately 70% to 80% of CASAT participants have been drug offenders; therefore, any decrease in drug offender commitments to NYSDOCCS would reasonably be expected to impact the availability of potential participants for the program. The number of drug offenders committed to DOCCS in 2021 (934) was slightly higher than in 2020 (872) which was the lowest recorded since the CASAT program started in 1990 and the lowest since 1985. This was a 7% (62) increase from 2020 but a 63% (1,586) decrease from 2019 and is attributed to similar decrease in new commitments in 2020 due, in part, to pandemic-related court processes and alternative sentencing (see Appendix B).

#### CASAT PHASE I and PHASE II QUARTERLY TRENDS: 2016-2021

- Focusing on the most recent years of the CASAT program (2016 2021), Table 1.3 and Figure 1.2 present quarterly Phase I and Phase II trends.
- Since 2016, the total number of Phase I participants generally increased until 2020, but then declined from 208 at the beginning of 2016 to 171 at the end of 2021 (-18%).
- The proportion of females in Phase I was 14% at the beginning of 2016 and decreased to 5% of Phase I participants at the end of 2021.
- Between the beginning of 2016 and the end of 2021, the number of CASAT Phase 2 participants has varied. It ranged from a high of 229 participants at the beginning of 2020 to a low of 70 in July 2020. On January 1, 2022, there were 161 Phase 2 participants. (Table 1.3).

#### CASAT Phase I and Phase II Population: Calendar Years 2016-2021

#### CASAT PHASE II : CONTINUING SUBSTANCE ABUSE TREATMENT

- After participating in an intensive, residential, therapeutic community-based substance abuse treatment component in Phase I, CASAT participants eligible to enter Phase II (work release) continue in substance abuse treatment. Males assigned to New York City work release facilities receive treatment services at their facility. Female work release participants from the New York City area are now assigned to Edgecombe Correctional Facility with outpatient treatment services provided by the Center for Community Alternatives.
- Starting in March 2007, incarcerated individuals entering CASAT Phase II in upstate work release facilities began receiving treatment services from community outpatient treatment providers. This program is federally funded under a collaborative project with the New York State Office of Addiction Services and Supports (OASAS). At the end of 2021, there were 64 participants attending weekly individual and/or group counseling sessions, a 36% increase from last year. (see Table 1.4).

Total		64

CONCLUSION

In view of the fact that approximately 70% to 80% of the CASAT participants have been drug offenders since the Sentencing Reform Act (SRA) of 1995, the decline in the number of such offenders committed annually to NYSDOCCS in recent years has reduced the pool of incarcerated individuals eligible for the CASAT program. CASAT participation in 2021 decreased compared to 2020, and a greater percentage of formerly Phase I participants were eligible to participate in Phase II continuing the trend from the past few years.
