

Corrections and Community Supervision

The Comprehensive Alcohol and Substance Abuse Treatment Program 2018

CASAT PROGRAM

The New York State Department of Corrections and Community Supervision (NYS DOCCS) Comprehensive Alcohol and Substance Abuse Treatment (CASAT) program was a creation of the 1989 Prison Omnibus Legislation.¹ This legislation called for the establishment of six 200-bed alcohol and substance abuse treatment annexes at specified locations. Persons successfully completing the six-month long annex phase of treatment (Phase I) would be transferred to a work release facility or an appropriate community based program (Phase II). The law also provided for an aftercare component upon release from the Department while under the supervision of the Division of Parole (Phase III). Appendix A diagrams the movement of the inmate through the CASAT program phases.

After briefly summarizing the CASAT program's history since 1990, this report focuses on recent program trends from 2006-2018. For an in-depth description of the CASAT program, please see "*The Comprehensive Alcohol and Substance Abuse Treatment Program: 2008*".²

PROGRAM GOALS

The CASAT program, with its mandate to provide a continuum of treatment services, is designed to achieve the following goals:

- To focus facility resources on the needs of inmates with a history of alcohol and substance abuse.
- To better prepare participants for return to their families and communities upon release.
- To reduce drug and alcohol relapse rates and recidivism rates for program participants.
- To ensure appropriate aftercare services in the community.
- To increase coordination among the pertinent state and local agencies, service providers, and community organizations.

¹ The New York State Department of Correctional Services and the New York State Division of Parole were merged through Legislative action on April 1, 2011. The resulting agency is the New York State Department of Corrections and Community Supervision.

² "The Comprehensive Alcohol and Substance Abuse Treatment Program: 2008," New York State Department of Correctional Services, Albany, New York 12226 (2009).

CURRENT PROGRAM ELIGIBILITY

- Documented history of alcohol and/or drug abuse.
- Minimum of 9 months to earliest release at the time of review to allow for sufficient program time, but no more than 24 months to merit eligibility (if, merit eligible) or earliest release date. One exception to this is that drug offenders may enter Phase I at 30 months to earliest release.
- Classified as medium or minimum security.
- Temporary release approvable except for some drug offenders sentenced by judges to CASAT treatment (court-mandated CASAT). Court-mandated CASAT offenders not meeting all CASAT program requirements, particularly temporary release eligibility, are permitted to enter Phase I but are not allowed to transition to Phase II. This group is referred to as Phase I-only participants. This program modification, implemented in May 2006, permits a larger pool of offenders to receive intensive, residential drug treatment. Court-mandated offenders who meet all established CASAT requirements are eligible to enter Phase II upon completion of Phase I.

The review for CASAT eligibility and the offender's interest in participating in a treatment program is conducted at reception or later at a general confinement facility between the inmate and the inmate's rehabilitation coordinator. Following this facility level review, information is forwarded to Temporary Release in Central Office for a final review of appropriateness for work release upon completion of CASAT Phase I. Those offenders found to be acceptable for temporary release represent the pool of potential participants for traditional CASAT Phase I and II programs.

PHASE I PARTICIPANT POPULATION: 1990-2005

- New commitments to NYSDOCCS jumped from 4,250 (including 470 drug commitments) in 1970 to a high of 25,155 in 1992 (including 11,225 drug commitments) (see Appendix B). The CASAT program expanded in the early 1990s to meet the substance abuse treatment needs of these offenders (see Table 1.1 and Figure 1.1).
- Executive Order #5, issued in 1995, significantly impacted the CASAT program by precluding the participation of most violent felony offenders in the Department's Temporary Release program. Further diminishing the pool of eligible offenders was the Sentencing Reform Act (SRA) of 1995, which created the Willard Drug Treatment Campus, designed to divert second felony offenders with substance abuse problems from NYSDOCCS incarceration. As a result of these two legal mandates, the CASAT Phase I program experienced an overall decline in participation from 2,369 on June 30, 1994 to 1,696 participants on June 30, 1996 (see Table 1.1).

PHASE I PARTICIPANT POPULATION: 2006-2018

- Further declines in CASAT Phase I participation continued until 2006 when the first impact of permitting temporary release ineligible, court-mandated offenders in the CASAT program was observed. The program increased from 467 on June 30, 2005 to 522 participants on June 30, 2006 (see Table 1.1).
- After the introduction of the court-mandated, temporary release ineligible offenders in 2006, Phase I participation rose until the first half of 2010 before declining. As a response to the steep decline in Phase I participation during the second half of 2010 and 2011, the Department closed Wyoming Alcohol and Substance Abuse Correctional Treatment Center (ASACTC) (120 beds) in March 2011 and reduced the program capacity of Taconic ASACTC to 44 treatment beds (from 136 beds) in May 2011 (see Table 1.1). Remaining Wyoming CASAT participants were transferred to Arthur Kill and Hale Creek to complete Phase I.
- Over a ten-year period, 2002-2011, the NYSDOCCS experienced a significant reduction in its under custody population. As a result, during 2011 and 2012, seven medium and minimum-security facilities were closed including Arthur Kill. CASAT participants not nearing program completion were transferred to a new 60-bed program at Marcy Correctional Facility that opened in October 2011 (see Table 1.2).
- In December 2012, the program for female CASAT participants was moved from Taconic ASACTC to Albion Correctional Facility. The program capacity at Albion ASACTC increased from 40 beds to 60 beds in August 2018.
- On July 1, 2018, there were 304 Phase I participants, one more than on July 1, 2017.
- Meanwhile, the number of court-mandated, temporary release ineligible participants has decreased. On June 25, 2010, 317 (or 52%) of total Phase I participants were temporary release ineligible compared with 26 (or 9%) of the total Phase I population on July 1, 2018 (see Table 1.2).

Source: DOCCS UC File

*Some program beds at CASAT facilities are occupied by offenders either waiting to begin Phase I or Phase I completers awaiting transfer to work release or general confinement facilities. These offenders are not included in these figures.

- As of July 1, 2018, 84% of all CASAT program beds were filled with participants. Albion was operating at 63% capacity, Marcy was at 78% capacity, while Hale Creek was at 91% capacity (see Table 1.2).

Recent declines in the number of offenders eligible for the CASAT program were a consequence of the sweeping Drug Law Reform Act of 2009. Elements of this law encouraged the expansion of Drug Courts and community-based substance abuse treatment in order to divert drug offenders from NYSDOCCS incarceration. Since the Sentencing Reform Act (SRA) of 1995, approximately **70% to 80%** of CASAT participants have been drug offenders; therefore, any decrease in drug offender commitments to NYSDOCCS would reasonably be expected to impact the availability of offenders for the program. The number of drug offenders committed to DOCCS in 2018 (2,884) was the lowest recorded since the CASAT program started in 1990 and the lowest since 1985. This was a 10% (-295) decrease from 2017 (see Appendix B).

CASAT PHASE I and PHASE II QUARTERLY TRENDS: 2014-2018

- Focusing on the most recent years of the CASAT program (2014 - 2018), Table 1.3 and Figure 1.2 present quarterly Phase I and Phase II trends.
- Since 2014, the total number of Phase I participants has generally increased, from 239 at the beginning of 2014 to 315 at the end of 2018 (+32%).
- The proportion of women in Phase I was approximately 13% at the beginning of 2014 and increased to a high of 20% in October 2015. Females represented 18% of Phase I participants at the end of 2018.
- Between 2014 and 2018, the number of CASAT Phase 2 participants has varied, ranging from a high of 220 in July 2017 to a low of 103 participants at the end of 2018 (Table 1.3).

CASAT PHASE II ----CONTINUING SUBSTANCE ABUSE TREATMENT

- After participating in an intensive, residential, therapeutic community-based substance abuse treatment component in Phase I, CASAT participants eligible to enter Phase II (work release) continue in substance abuse treatment. Men assigned to New York City work release facilities receive treatment services at their facility. Women work release participants from the downstate area are now assigned to Edgecombe Correctional Facility (female) with outpatient treatment services provided by the Center for Community Alternatives.
- Starting in March 2007, inmates entering CASAT Phase II in upstate work release facilities began receiving treatment services from community outpatient treatment providers. This program is federally funded under a collaborative project with the New York State Office of Alcoholism and Substance Abuse Services. As of December 2018, there were 47 participants attending weekly individual and/or group counseling sessions (see Table 1.4).

CONCLUSION

In view of the fact that approximately **70% to 80%** of the CASAT participants have been drug offenders since the Sentencing Reform Act (SRA) of 1995, the decline in the number of such offenders committed annually to NYSDOCCS in recent years has reduced the pool of inmates eligible for the CASAT program.
